Universal Body styling kits

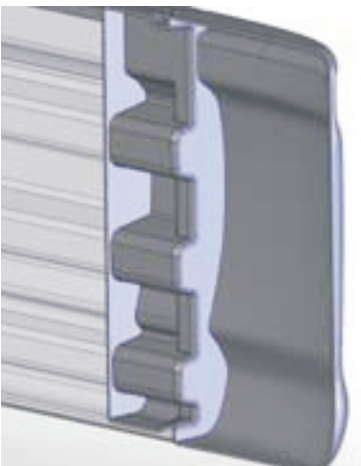

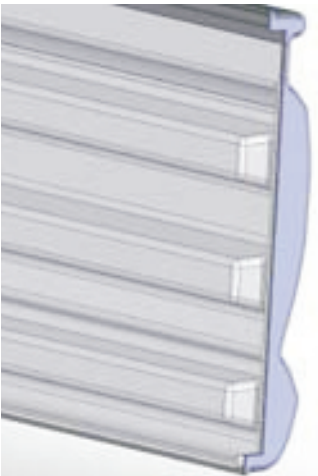

Innovative and Economical

500 serie Universal Body styling kits

- The panels have a new double skin profile made from high impact ABS plastic to guarantee maximum stability, without any aluminium profile needed.

- Main brackets are hinged from the bottom but they can also be mounted fixed. The panels open from up to down and the panel stays open in 95 degrees. When the panel is opened down, it can easily be removed away from any maintenance work. The bracket can be mounted anywhere in the panels reinforcement railing.

Precision custom made, designed by man, made by robot!

- EC 89/297 sideguard proved
- Maximum fuel economy
- Improved vehicle handling
- Improved safety due to excellent spray suppression values and side protection
- Environmentally friendly
- Softer image on the high street

- Can easily be painted to your vehicles colour
- Panels can be cut to size (length) and you can use the extra panel material on other part of the vehicle
- All parts can be mounted fixed or hinged
- The panels have a new double skin profile made from high impact ABS plastic to guarantee maximum stability, without any aluminium profile needed.

Precision custom made, designed by man, made by robot!

All our products are cut and finished by 5-axel CNC-machines, which quarantees high quality.

We use the latest CAD / CAM technology in designing the parts and making the tools. We can use clients 3-D designs or we can offer the full service in measuring, designing and producing the tools and parts. Ultrasonic welding is used to attach plastic pieces together.

Brackets are made from high quality materials and powder painted in our own painting line.

Waste and rejected parts, such as acrylic, ABS, PET-film and card board boxes are recycled.
