

AVOID MIRROR DAMAGE, SAVE YOUR FLEETS MIRRORS!

SUPER TOUGH MIRROR PROTECTION

The **Problem** Of Broken Mirrors

Tight Streets

Narrow lanes and tight streets can be a squeeze at the best of times, but for HGV's, they are even narrower. Combine this with two large trucks passing each other, and mirror damage becomes highly likely. Whether it's from hedgerows, other passing vehicles, or walls which line the streets, there are many potential risks of impact to the mirror.

Large Mirrors

Vehicle mirrors are becoming larger! They provide excellent visibility and are very useful to the driver. However, they also provide a much larger target for damage, costing more to replace, and sometimes running into hundreds of pounds for a replacement mirror assembly. It is incredibly risky to not protect your mirrors.

Broken Mirrors Cause VOR's

If a driver has a broken mirror, they can not drive safely.

The **Solution** To Broken Mirrors

Super Tough Protection

MirrorShield is constructed from a super strong, formulated fibre mix. The unrivalled level of protection is both lightweight and highly effective in protecting the mirror and its housing from both low level and high level impacts.

Highly Visible To Road Users

MirrorShield is available in a range of colours from stock, and can also be colour matched to your fleet. It is most commonly fitted in high visibility colours, making the vehicles mirrors clear to other road users, aiding in minimising collisions.

No Compromise On Visibility

MirrorShield's sleek design is moulded to the shape of the vehicle's mirror. This means that the driver still has perfect viewing angles and maximum visibility. There is no compromise on visibility; if a driver has a broken mirror, they cannot drive safely. MirrorShield aims to prevent this.
