**TruckChef, the 24v microwave oven that fits almost any truck perfectly. With a huge 20 litre capacity and 800w cooking output, it's like having your kitchen appliance from home, right there in your truck.**

TruckChef was born in 2014, filling a gap in the market after Samsung discontinued the RoadMate 24v microwave. Kuda saw an opportunity, and TruckChef is now quickly becoming Europe's fastest selling 24v microwave. TruckChef has been engineered to fit as many truck cabs as possible, while maintaining the maximum power and cooking capacity.

Made right here in the UK and backed by a full years warranty and dedicated in-house technical team, the quality of TruckChef is second to none. In fact, the quality is so good that the failure rate is almost completely non-existent.

Supplied with every TruckChef microwave is a vehicle specific fitting kit. By taking the time and effort to get these mounting kits just right, Kuda have achieved a product which not only fits the largest range of commercial vehicles out there, but - most importantly- is one enclosed unit, meaning no separate inverter taking up space.

TruckChef has been launched right across Europe with a range of approved dealers supplying to 1000's of customers. Currently, TruckChef has been approved in the UK by 3 major UK truck manufacturers who are supplying it directly to their customers via nationwide parts network.

# Microwave Features Manual

## Please note - Instructions for Features, Controls and Cooking only

The control panel on the front of the microwave unit consists of two function operators. One is a timer and the other a power knob.

### Power Selector.

You use this knob to choose a cooking power level. It is the first step to start a cooking session.

### Timer Selector.

This knob offers visual timing settings. Just select the desired cooking time by turning the knob. Up to 30 minutes per cooking session.

### Microwave Cooking.

The TruckChef microwave offers six power levels from which to choose from. You can select and increase the power levels by turning the knob clockwise. The power levels can be classified as the following;

	Power Input.	Description.
1.	100%	High 800w
2.	85%	M. High 600w
3.	66%	Medium 460w
4.	48%	M. Low 350w
5.	40%	Defrost
6.	17%	Low 120w

**Note -** As soon as the timer is turned and the unit has power the oven will start cooking. When selecting times less than 2 minutes, turn the dial past 2 minutes and then back to the desired time. The timer should always be returned to the zero position after use. Check food is piping hot and cooked before consuming. The above power levels are only a guide and should in no way be used to alter any food / meal recommended cooking times.
